

Jenkins Email Notification Configuration using Gmail (App Password)

1. Generate Gmail App Password:

- Enable 2-Step Verification in Google Account.
- Create App Password for Mail.
- Use the 16-character password in Jenkins.

2. Add Jenkins Credentials:

- Go to Manage Jenkins → Credentials → Global → Add Credentials.
- Kind: Username with Password.
- Username: Your Gmail ID.
- Password: Gmail App Password.
- ID: gmail-smtp-creds.

3. Configure Extended Email Notification:

- Manage Jenkins → System → Extended E-mail Notification.
- SMTP Server: smtp.gmail.com
- SMTP Port: 587
- Use TLS: Enabled
- Credentials: Select gmail-smtp-creds

4. Configure E-mail Notification (optional):

- SMTP Server: smtp.gmail.com
- Port: 587
- Use TLS: Enabled

5. Jenkins Pipeline Example:

```
post {  
  
always {
```

```
emailtext(  
  to: "yourmail@gmail.com",  
  subject: "Build Status",  
  body: "Build completed"  
)  
}  
}
```

6. Fixing Common Errors:

- 'Authentication required': Select correct credential in Email Notification.
- 'Unsupported SSL message': Disable SSL, enable TLS on port 587.
- 'No password specified': Ensure credential ID is selected.

7. Result:

- Test email success.
- Pipeline build email success.
